1. domaća zadaća

Ivan Smojić, 0036407265

1. Izračunajte vrijednosti faktora ekstrakcije δ i omjere R_1/L i R_2/L za pozitivnu i negativnu granu. Povećanje m neka se mijenja od 0 do 5 sa korakom 0.1. Rezultate prikažite tablicom.

Formule kojima se dolazi do vrijednosti omjera i faktora ekstrakcije su:

faktor ekstrakcije
 δ :

$$\delta = 1 - \left(\frac{1}{m}\right)^2$$

pozitivna grana:

$$\frac{R_1}{L} = \frac{2 \cdot m}{m - 1}$$

$$\frac{R_2}{L} = \frac{-2}{m - 1}$$

negativna grana:

$$\frac{R_1}{L} = \frac{2 \cdot m}{m + 1}$$

$$\frac{R_2}{L} = \frac{2}{m + 1}$$

		pozitivna grana		negativna grana

2. Grafički prikazati $m=f(\delta)$, $R_i/L=f(\delta)$ za pozitivnu i negativnu granu.

Faktor ekstrakcije $m=f(\delta)$

Faktor ekstrakcije $\delta=f(m)$

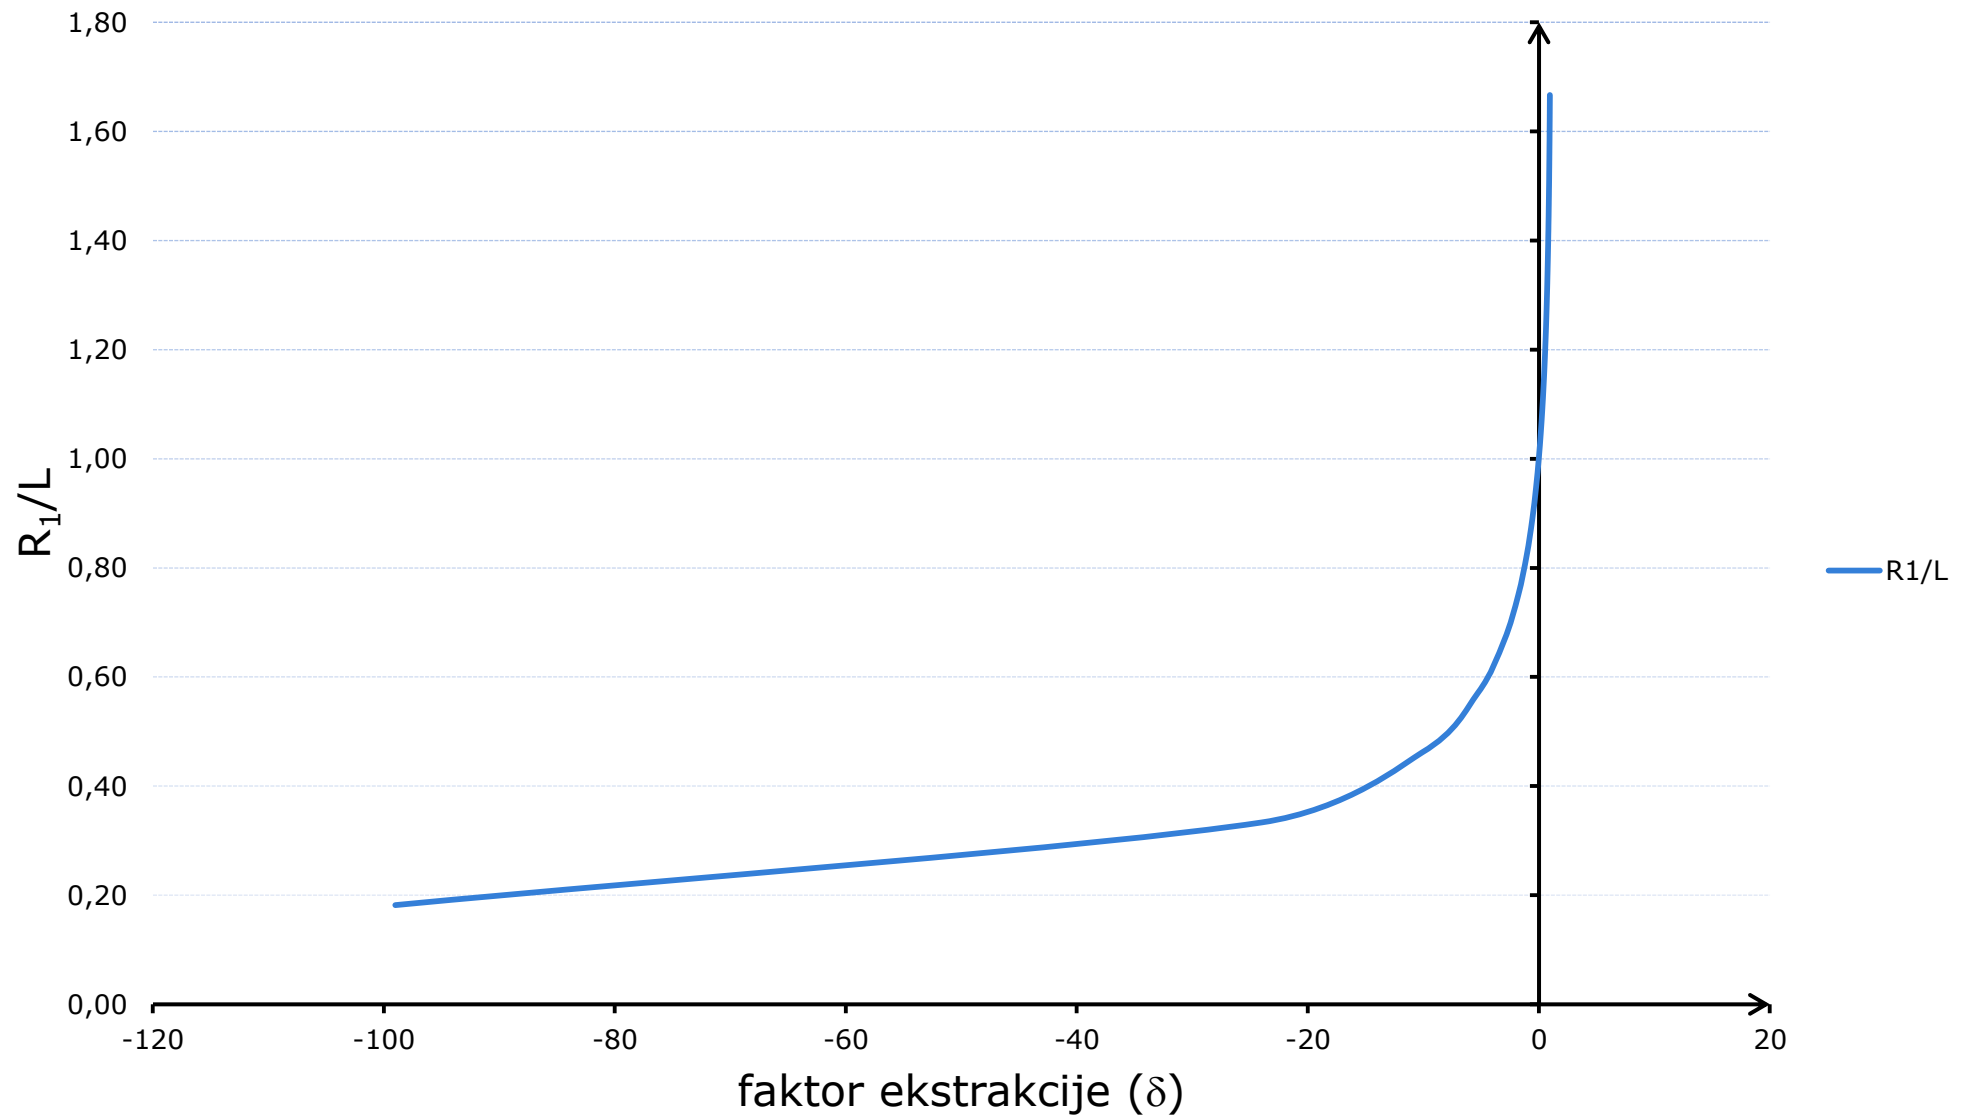

pozitivna grana: $R_1/L=f(\delta)$

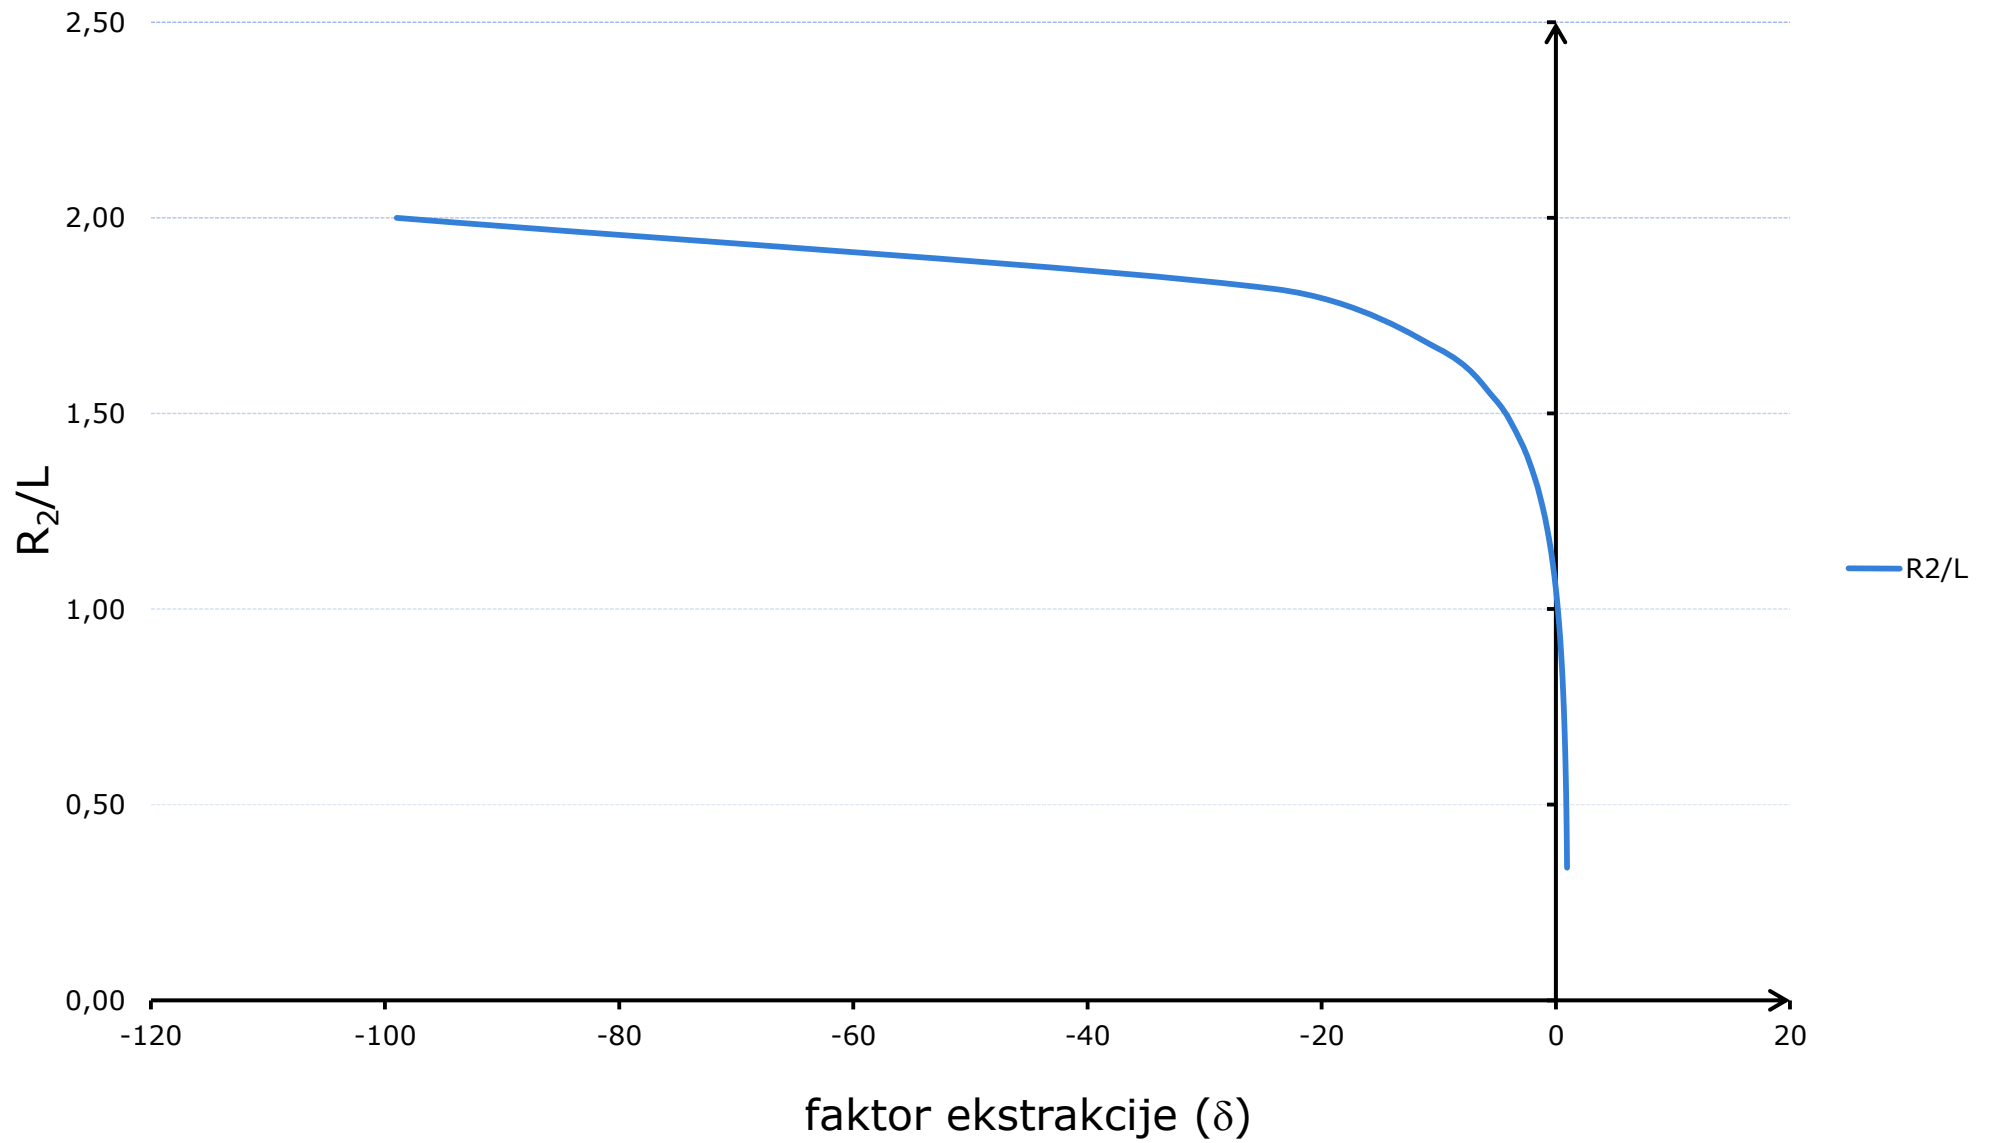

pozitivna grana: $R_2/L=f(\delta)$

negativna grana: $R_1/L=f(\delta)$

negativna grana: $R_2/L=f(\delta)$

Pozitivna grana, $R_i/L=f(\delta)$

Negativna grana, $R_i/L=f(\delta)$

3. Izračunajte (za $L = 2000$ mm, $a_1 = 25$ mm uz uvjet konfokalnosti (1) i $R_1 = 6400$ mm), g_1 , g_2 , g_1g_2 , δ i osjetljivost faktora ekstrakcije: $d\delta/dR_i$ za pozitivnu granu.

$$L = 2000 \text{ mm} = 2 \text{ m}$$

$$a_1 = 25 \text{ mm}$$

$$R_1 = 6400 \text{ mm}$$

$$g_1, g_2, g_1g_2, \delta, \frac{d\delta}{dR_i} ?$$

pozitivna grana:

$$R_1 = \frac{2m}{m-1} \cdot L, \text{ pa slijedi } \frac{2m}{m-1} = \frac{R_1}{L} = \frac{16}{5}$$

$$10m = 16m - 16$$

$$-6m = -16 \Rightarrow m = \frac{8}{3} = 2.667$$

$$g_1 = \frac{m+1}{2m} = \frac{2.667+1}{2 \cdot 2.667} = 0.6874$$

$$g_2 = \frac{m+1}{2} = \frac{2.667+1}{2} = 1.8335$$

$$g_1 \cdot g_2 = \frac{(m-1)^2}{4m} = 1.2603$$

$$\delta = 1 - \left(\frac{1}{m}\right)^2 = 0.8549$$

$$\frac{d\delta}{dR_1} = \frac{m-1}{m^3 \cdot L} = \frac{2.667-1}{2.667^3 \cdot 2m} = 0.044 \text{ m}^{-1}$$

$$\frac{d\delta}{dR_2} = \frac{m-1}{m^2 \cdot L} = \frac{2.667-1}{2.667^2 \cdot 2m} = 0.1171 \text{ m}^{-1}$$
